

Side Gripper

Elevator and Lowerator

WHY MCE

- > Heavy-Duty
- > Versatile
- > Quick & Cost-effective
- > Made in the U.S.A.

ABOUT MCE SIDE GRIPPER EQUIPMENT

The Side Gripper Elevator/Lowerator has the advantage of securely elevating or lowering product using very little floor space. This unit firmly but gently grips product from the same elevation as the in-line conveyor and provides continuous transport through an elevation change. Grippers then release the product through a seamless discharge onto a take-away conveyor.

MODULAR FEATURES

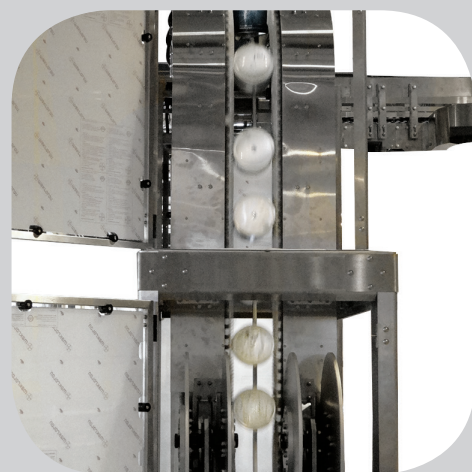

- > Trouble-free field modifications
- > "C" or "S" configuration
- > Saves on floor space
- > Easy integration into existing systems
- > Flexible installation

MCE Side Gripper Standard Technical Features

Standard speeds of up to 200 feet per minute can be expected on the MCE side gripper elevator. The side gripper elevator adjusts from 0" - 14" wide with the turn of a single handwheel and is designed to quickly change the elevation of various bottles, jars, cans, containers, and packages.

- > Reversible operation
- > Industry-standard spare parts
- > Used in many production or warehousing environments

Frame Construction	12 GA Stainless Steel or Powder Coated Mild Steel
